

Project Management Boot Camp 2: MS Project Course Outline

The Ramapo College MS Project 2010 boot camp provides hands-on, intensive exposure to this essential project management tool.

There are millions of licensed users of MS Project 2010, but there is a lot of hidden capability that is not used. This live, eight hour boot camp breaks down the hidden features, and allows the student to use the program as it was designed.

The centerpiece of this boot camp is student construction of a detailed, resourced, costed project schedule, and then tracking of that schedule. The student will also prepare the schedule for presentation using the extensive display features in MS Project. We will also show how other MSOffice products can be used for both data input and output.

Proficiency in MS Excel and MS Word is required, as well as attendance at the Ramapo College Bootcamp.

The instructor is a PMP, and has used MS Project for twenty years.
