

Natural Gas

By: Justin Yan

I hope you have learned about the information from the natural gas presentation. There are many issues surrounding natural gas which involves many workers, and how it contributes to global warming. You've learned about the production process of natural gas fracking, the map flows of natural gas, and how companies use natural gas and more.

If there are any more information, I hope this will be knowledgeable about the problems of natural gas. Do your research on the problems related to natural gas. Most importantly, take action by contacting political entities to tackle natural gas and fracking. Finally, I encourage to think on other ways to restrict the use of natural gas in order to combat climate change. The decision is yours.
