

Tin

- Tin is a chemical element that is a silvery white metal, and belongs to the carbon family in Group 14.
- Tin is used for plating steel cans that is used for canned food and beverages. Tin is also used in electric cars, advanced robotics, renewable energy, advanced computation, and more.
- Tin is mined in countries such as Peru, Brazil, Bolivia, and Indonesia. In some of the third world countries like these there are a lot of health and safety issues, lack of payment, under age workers, and more happening during the production and mining of tin.
- Ways to help these people in being mistreated and in need is to spread awareness on social media platforms or donate to organizations such as [Pact illuminating hope for the mining industry | Global Impact \(charity.org\)](#), which uses their funds to help these miners.
