

Platinum Jewelry

Platinum is a very pure material, making items made of it expensive and high quality.

Most of the world's platinum is produced in South Africa, around 80%. 30% of that goes towards jewelry.

The mining process is extremely dangerous and has some health implications.

Whole communities are harassed and persecuted by large companies in south africa to take control of the land.

Here is a petition to help the communities in danger:

<https://www.change.org/p/department-of-mineral-resources-stand-with-mining-affected-communities-and-demand-the-right-to-say-no>
