

How to Make Your Own “Smartboard”

Dr. Michael Bitz
Assistant Professor of Teacher Education

An interactive whiteboard (or “smartboard”) is a large interactive display that connects to a computer and projector. A projector projects the computer's desktop onto the board's surface where users control the computer using a pen, finger, stylus, or other device—in this case, an infrared pen. Unlike other systems, this one is mobile and can be projected onto any surface.
